

Adding Google Analytics to a site (using GTM)

Execution Time: ~15-30 minutes

Goal: To add Google Analytics to a site using Google Tag Manager and verify that it is working properly.

Ideal Outcome: Google Analytics is properly added without any technical issues.

Pre-requisites or requirements: You can only do this once you have installed Google Tag Manager on your site.

Why this is important: Google Analytics is the most popular tool to measure website data to gather visitor insights. With it, you will be able to know the amount of traffic you are getting, and how your visitors are behaving inside your website.

Where this is done: In Google Tag Manager and Google Analytics.

When this is done: Only once—the first time you install Google Analytics.

Who does this: The person responsible for website management, or analytics.

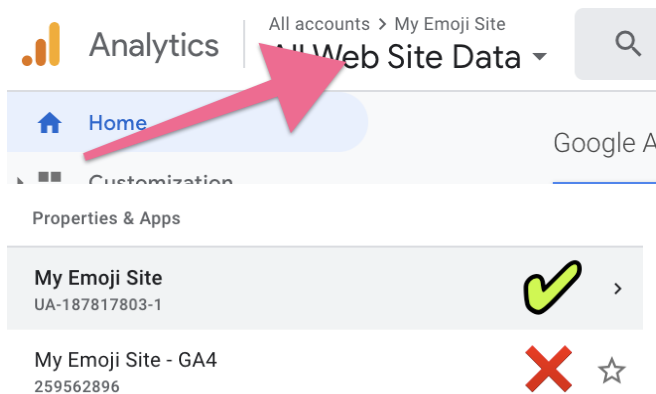

SOP Update: Google Analytics 4

💡 **Note:** Google has released a new version of Google Analytics in October 2020, this new version can be set as a property alongside standard version “Universal Analytics”.

The “Universal Analytics” properties will likely be supported by Google for years to come, by setting up a Universal Analytics property alongside a Google Analytics 4 property you can take advantage of the stable and documented features of Universal Analytics while still future-proofing yourself with a Google Analytics 4 property. This is the scope of this SOP.

To make sure you can follow this step-by-step SOP make sure you have selected the Universal Analytics property once your Google Analytics account has been created.

1. On the top left corner click on the Account Dropdown and select a view within your Universal Analytics property (Not the GA4 property):

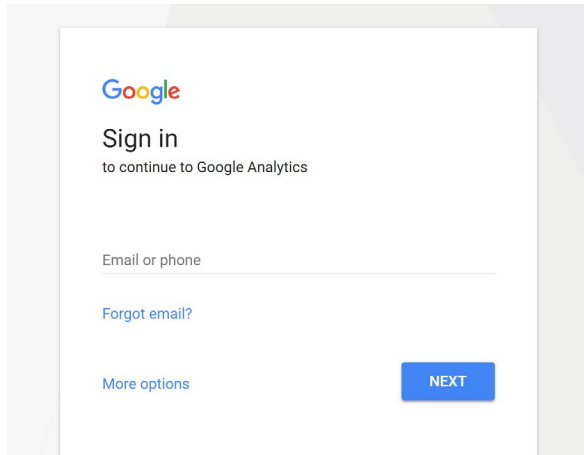

💡 **Note:** You can identify your Universal Analytics property by noticing the ‘UA-’ prefix in the Property ID below its name:

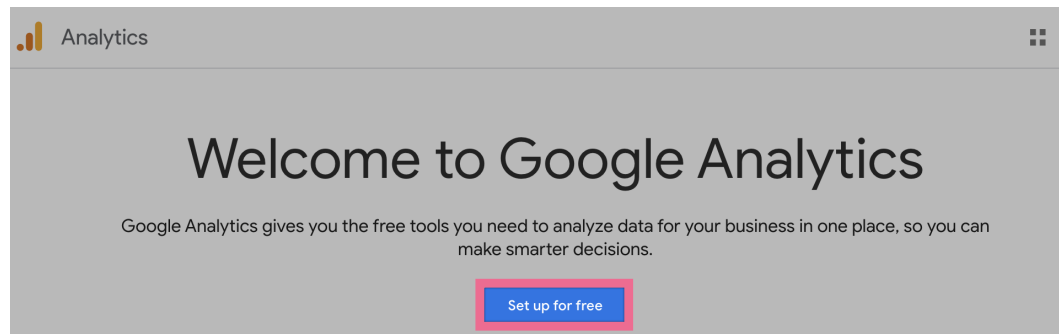

Create and set up a Google Analytics Account

1. Go to <https://analytics.google.com/>
2. If you are not logged in to your Google account you will be prompted to log in:

3. If you are already logged in to your Google Account but you don't yet have a Google Analytics account, you will want to create one now by pressing "Sign Up":
 - a. **Note:** *Your Google Account can be used for multiple Google services (e.g. Gmail, Adwords, Analytics, etc) but you still have to sign up individually for each service.*

1 Account setup

Account details

Account name (Required)
Accounts can contain more than one tracking ID.

Account Data Sharing Settings [?](#)

Data you collect, process, and store using Google Analytics ("Google Analytics data") is secure and kept confidential. This data is used to [maintain and protect](#) the Google Analytics service, to perform system critical operations, and in rare exceptions for legal reasons as described in our [privacy policy](#).

The data sharing options give you more control over sharing your Google Analytics data. [Learn more](#).

Google products & services
If you have enabled [Google signals](#), this setting will also apply to authenticated visitation data which is

- a. **Account Name:**
 - i. If you want to manage multiple websites under this account you might want to have a name here that applies to all websites.
 - ii. If you only have one website you might want to type the name of your website, or your business
- b. **Account Data Sharing Settings:** Optional data-sharing settings that you can opt-in or out of.

5. Click "Next"

- a. **Property Name:** Write a name that will easily identify the exact website you'll be tracking. You can even enter the URL of your website If you wish.
- b. **Reporting Time Zone:** Select the Time Zone that you would like to see being used in your reporting. Usually, this will be the time zone where most of your visitors are located.
- c. **Currency:** If your website handles transactions, this is where you should select the currency your website uses.

6. Click "Show advanced options" ( Important Step)

Currency
US Dollar (USD \$) ▼

You can edit these property details later in Admin

[Show advanced options](#)

[Next](#) [Previous](#)

7. Click “Create a Universal Analytics property” and enter the following options:

[Hide advanced options](#)

Create a Universal Analytics property

The Universal Analytics property is a part of an earlier version of Google Analytics and only supports web measurement. It is not recommended for new Analytics users, and it will not support app measurement. Turn this on if you'd like to create a Universal Analytics property.

Website URL
https:// ▼

Create both a Google Analytics 4 and a Universal Analytics property
This will create two properties with connected site tags, so you only need to tag your website once. [Learn more](#)

Enable enhanced measurement for Google Analytics 4 property
Automatically measure interactions on your sites in addition to standard screen view measurement.
Data from on-page elements such as links and embedded videos may be collected with relevant events. You must ensure that no personally-identifiable information will be sent to Google. [Learn more](#)

- a. **Website URL:** Select the right protocol for your website (http:// or https://):
- i. If you don't know what your website's protocol is type your website URL in Google Chrome starting with “https://” (e.g. [“https://clickminded.com”](https://clickminded.com))

1. If you see a green padlock before the URL appearing, it means you should select “https://”

2. If instead you see a red padlock and a “Not Secure” message appearing, you will want to select “http://”

- b. **Create both a Google Analytics 4 and a Universal Analytics property:**
Select this option.

- i. Enable enhanced measurement for Google Analytics property: Yes
- c. **Industry Category / Business Size / How do you intend to use Google Analytics:** Select the ones that apply. Don't worry, this will not have a direct impact on your tracking and is an optional field. It is used by Google to help them improve Google Analytics and compile industry averages.

8. Scroll down to the bottom and click on: "Create":

Measure lead generation
 Other

[Create](#) [Previous](#)

9. Read and accept the Terms & Conditions:

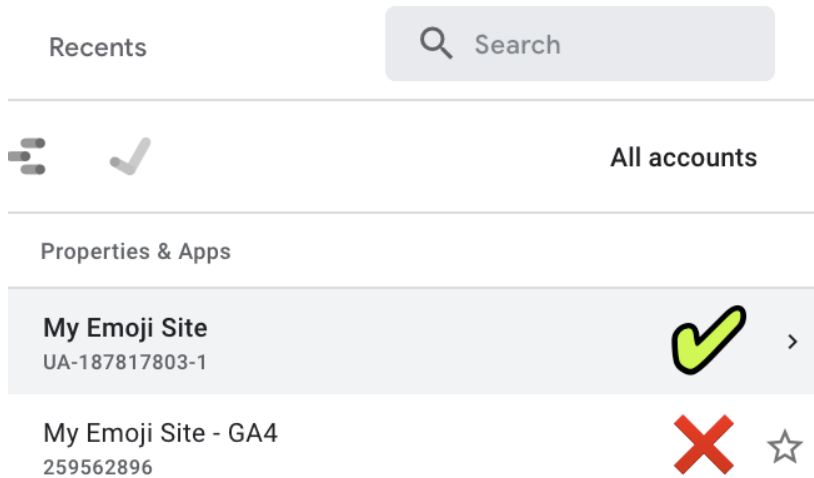

I accept the Measurement Controller-Controller Data that I share with Google.

[I Accept](#) [I Do Not Accept](#)

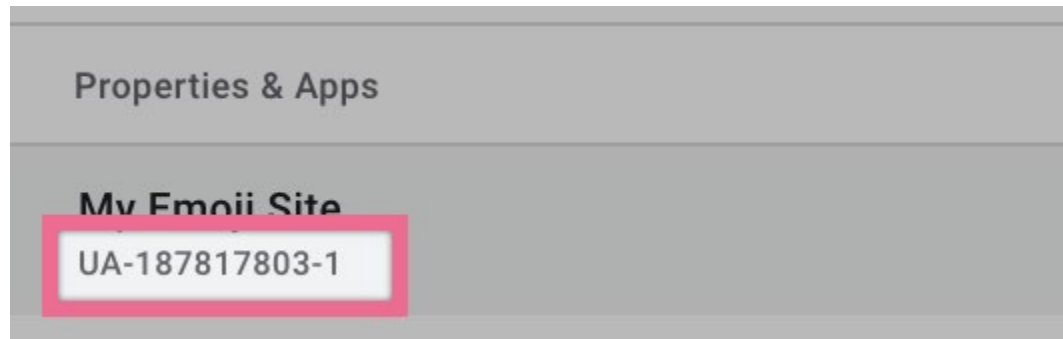

10. You will be sent to the Google Analytics account you've just created. On the top left corner select your Universal Analytics property (Not the GA4 property):

💡 **Note:** In addition to the “GA4” at the end of the Property name (indicating the Google Analytics 4 property), you can also identify your Universal Analytics property by noticing the ‘UA-’ prefix in the Property ID below it’s name:

11. Take note of your Google Universal Analytics tracking ID, you will need it for the next steps. This ID will be a code that starts with “UA-”.

Set up Google Analytics using Google Tag Manager

Note: If you don't have Google Tag Manager set up on your website, you will want to follow the procedure covered in [SOP 004 - Add Google Tag Manager to a Wordpress Site](#)

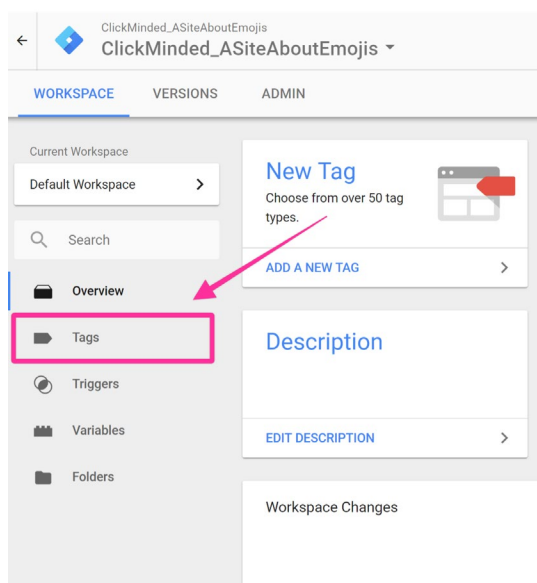

1. Go to <http://tagmanager.google.com> and sign in with your account details.
2. Select the container that is set up on your website.

A screenshot of the Google Tag Manager interface showing a list of containers. The container name 'ClickMinded_ASiteAboutEmojis' is highlighted with a pink arrow. The table below shows the container details.

Container Name ↑	Container Type	Container ID
ClickMinded_ASiteAboutEmojis	Web	GTM-WHHVQ4B

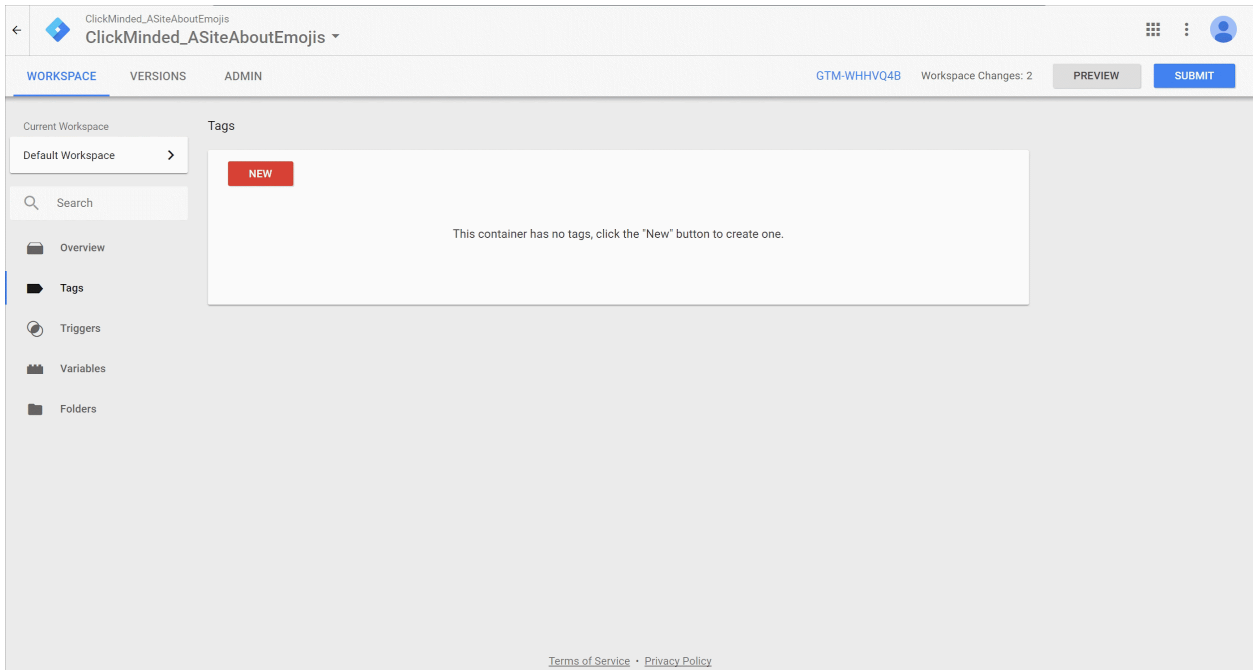

3. Go to “Tags”:

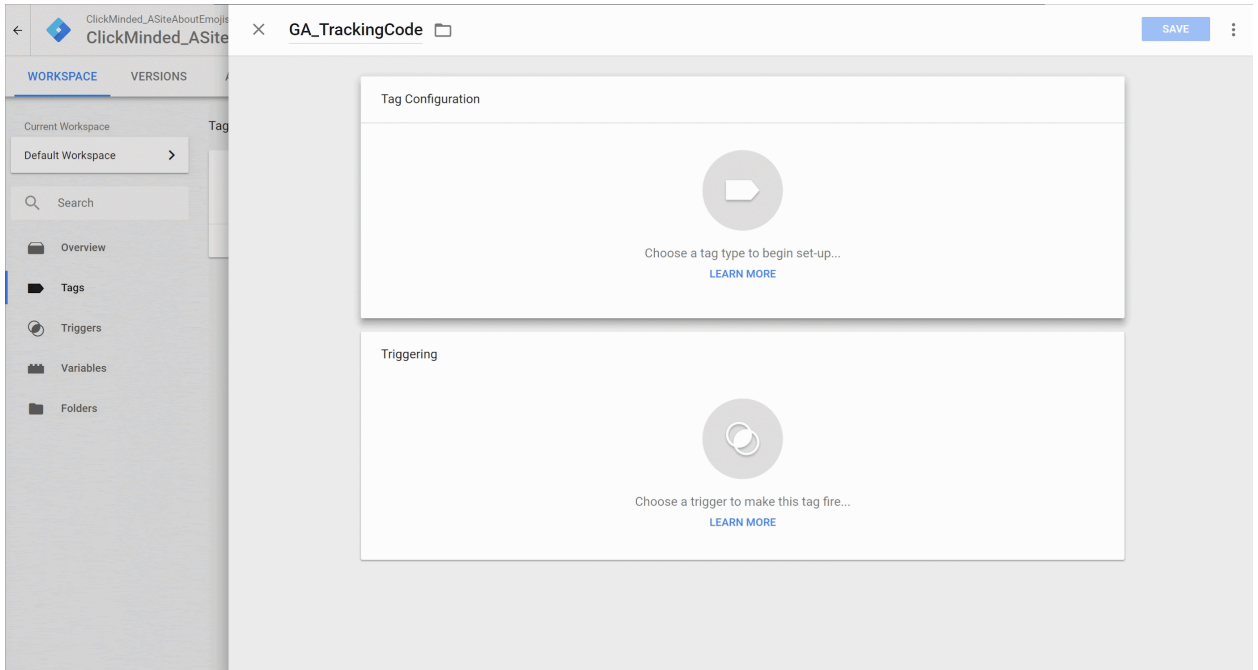

4. Click on “New” and rename your tag. It is recommended that it contains a mention to Google Analytics, it makes it easier in the future to locate the tags you are looking for.
 - a. **Note:** When creating new tags it's recommended to define a naming convention from the beginning, this keeps your Google Tag Manager set up neatly organized and easy to maintain for many years to come.

[Abbreviated Name Of Tool]_[Use for this tag] is a good start.

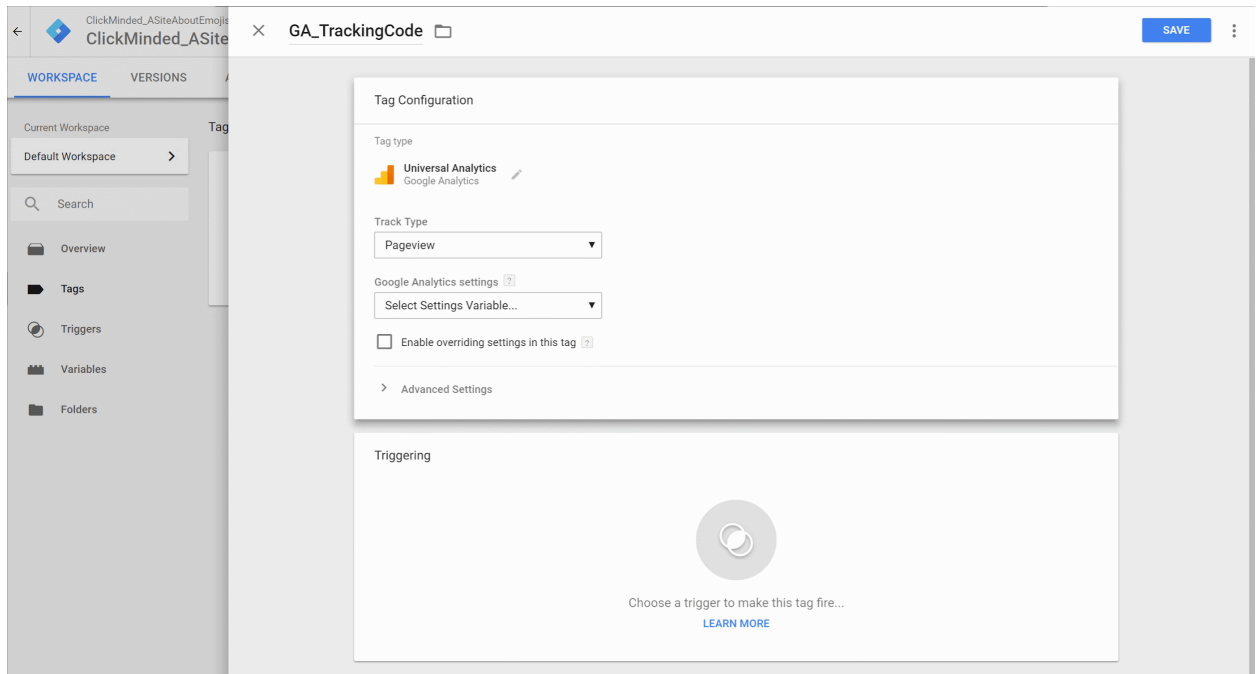

i. e.g: “GA_TrackingCode”

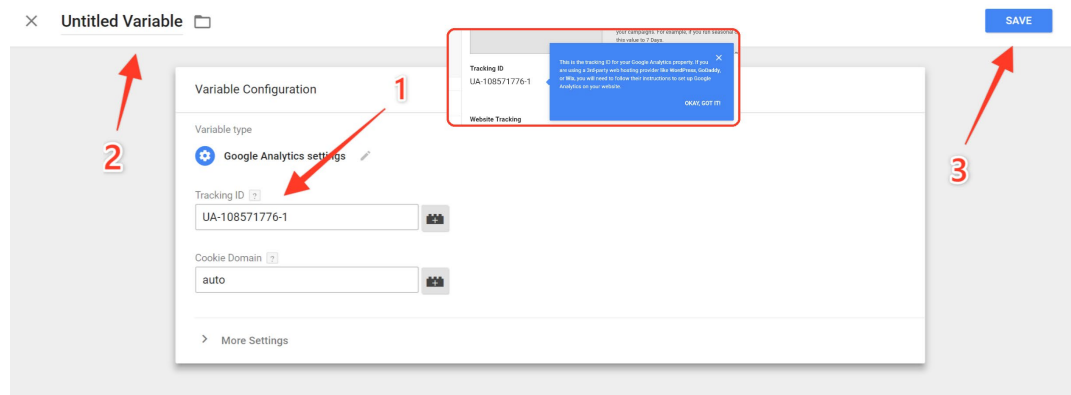

5. Click on the “Tag Configuration” section → Select “Universal Analytics”:

6. You’re now going to create a “Variable” where we are going to store the Google Analytics Tracking ID. Click on the “Google Analytics Settings” selection box, and select “New Variable...”

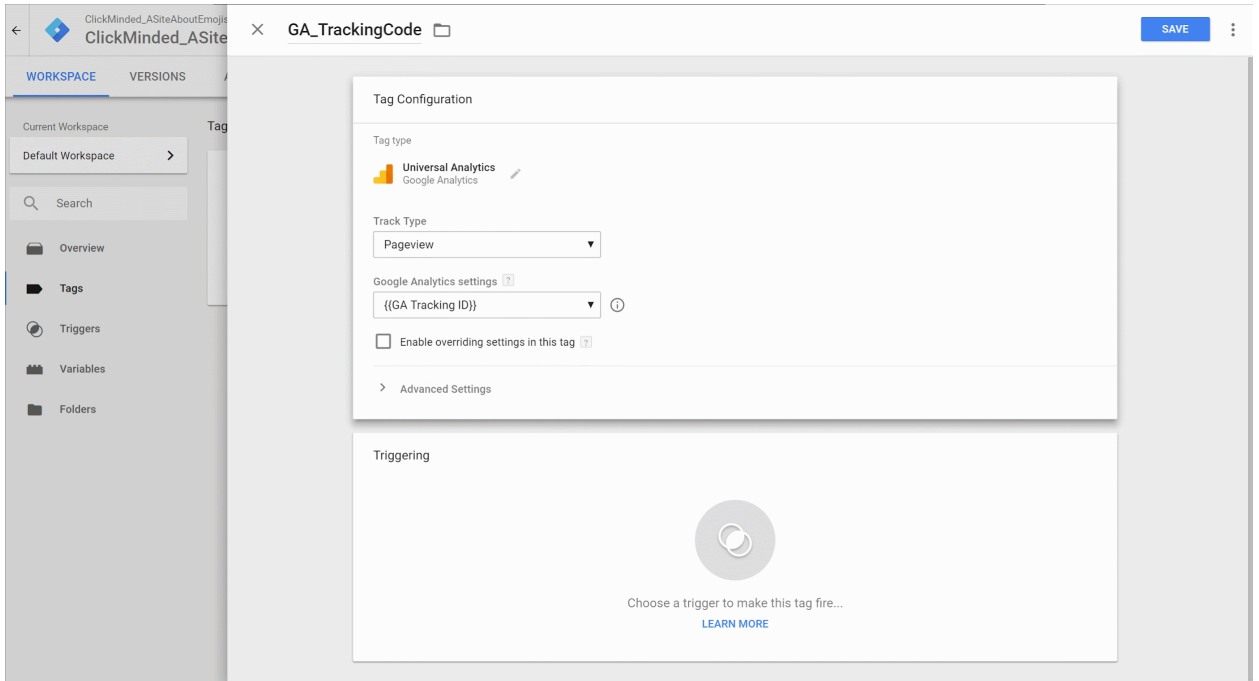

- a. First, copy the Google Analytics Tracking ID (that you took note of in the beginning of this SOP)
- b. Next rename the variable by clicking on the text on top. (you will want to give it a name that easily identifies what this variable is - e.g. "GA Tracking ID")
- c. Finally, hit "Save"

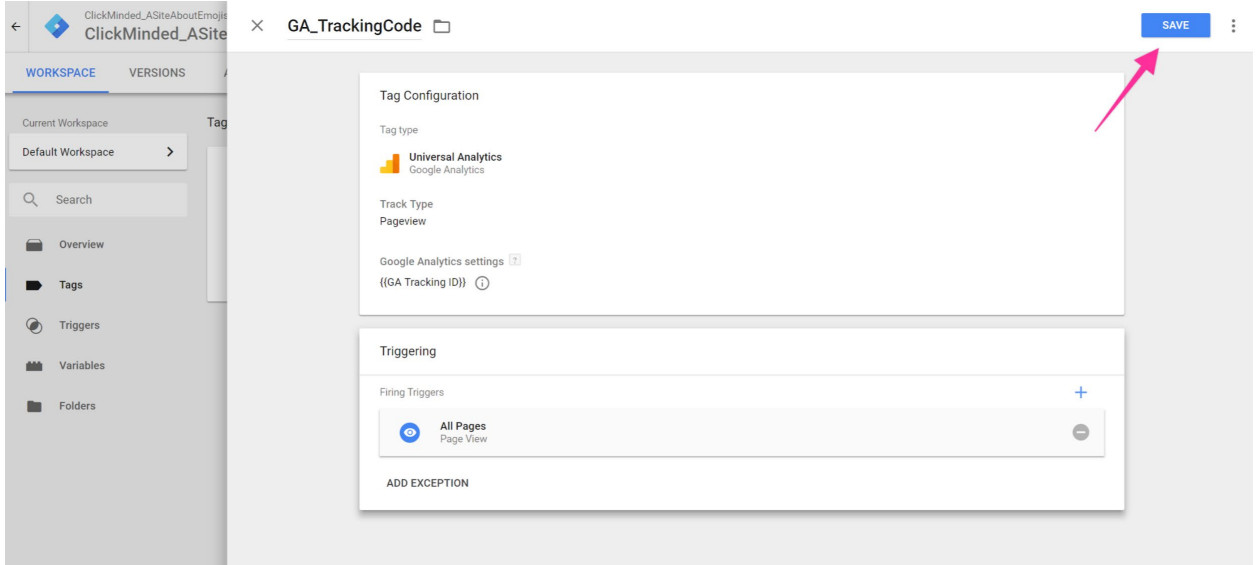

- d. You will be taken back to the previous menu.

7. Now you will want to set up a "Trigger" for this "Tag". To do that, click on the "Triggering" section, and once the new menu opens click "All pages":

8. You are now ready to save your settings by clicking on “Save”:

Verify your set up with Google Tag Assistant

Note: This step requires Google Chrome's [Google Tag Assistant extension](#) to be installed on your browser.

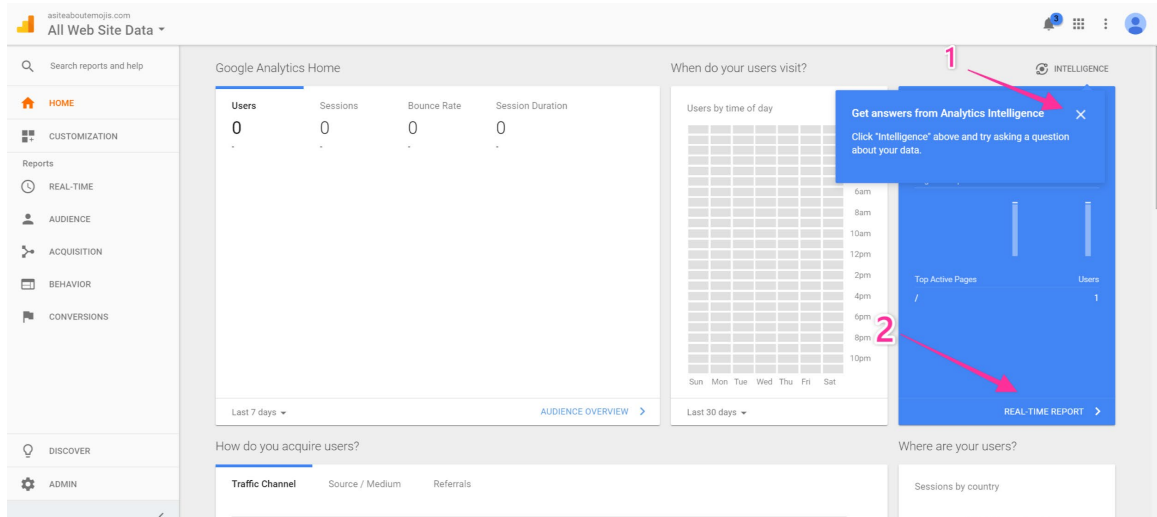

1. Go to your website's homepage
2. On your browser click on the Tag Assistant Icon

3. You should be able to see a Tag named “Google Analytics” and your Analytics Tracking ID beneath it (UA-XXXXXXXXX-X)
4. Repeat this procedure for a few more pages of your website. You should always be able to see the “Google Analytics” tag inside Google Tag Assistant.

Verify your setup inside Google Analytics

1. Open Google Analytics by heading over to <https://analytics.google.com>
2. You will be taken to your account Home.
3. Close the popup and click on “Real-time Report”

4. In another Google Chrome tab or window open up your website URL.
5. Now go back to the Google Analytics' tab and wait a few seconds.
6. You should see (at least) 1 active user on the website:

Right now

1

active users on site

Adding your first views

Note: If you have just created your Google Analytics account you will notice you now have one view named “All Web Site Data”. This is alright if you are sure you will not be doing any customizations on your Google Analytics properties.

However, we recommend that you create 3 additional views:

- **Main View:** This is your go-to view. This is where you will be doing all your analysis and should be working flawlessly. All customizations to Google Analytics should have already been properly tested in the Staging View as not to affect this view’s data.
- **Staging View:** This is your Google Analytics sandbox. If you want to test something new but are unsure how it will affect your data (e.g: creating a new filter) you will want to do it here and give it a few days before migrating the changes to the Master View.
- **Unfiltered View:** This view will be left untouched no matter what. No customizations whatsoever will be done to this view.

With this structure, you will always have a way to recover lost data in case something goes wrong. The unfiltered view will always have all your data. And the “Main View” will have all your filters properly applied.

1. Go to your Google Analytics Admin page by clicking [here](#).
2. If you have multiple Analytics accounts make sure the right account and property is selected:

ACCOUNT

My Emoji Websites

PROPERTY

asiteaboutemojis.com

3. Under “View” click on the dropdown box and select “Create a new view”:

VIEW

All Web Site Data

Search

All Web Site Data

Create new view

Using 1 out of 25

4. Insert the view details:
 - a. **Note:** Make sure you select the same “Reporting Time Zone” you have selected for the other views.

What data should this view track? _____

Website Mobile app

Setting up your view _____

Reporting View Name

Reporting Time Zone

(GMT-07:00) Pacific Time

This property has 1 view. The maximum is 25.

5. We're now going to create the Staging View. To do that, select the "All Web Site Data" from the dropdown. And click on "View Settings":

6. Click "Copy View"

View Settings

Basic Settings _____

View ID
163216311

View Name

Website's URL

7. In the "New view name" field type "Staging View", and click "Copy View":

Copy view

Copying view **All Web Site Data**. Please enter a name for the new view.

New view name

>

This property has 3 views. The maximum is 25.

8. You should now have these 3 views:

VIEW

Unfiltered View ▼

🔍 Search

All Web Site Data

Staging View

Unfiltered View

Create new view Using 3 out of 25

9. All we need now is to rename the original view and we'll be done. To do it, select the "All Web Site Data" view.

10. Click on "View Settings":

11. Click on "View Settings" and rename the view name that will now be your "Main View" and hit "Save":

View Name

12. You should now be able to see your first three views:
